| powder coating     |   |

No CHEMICALS  
No TOXIC FUMES

No TOXIC FUMES  
No CHEMICALS

## TYPICAL APPLICATIONS

### Boats

Originally designed with the marine industry in mind – tough anti fouling can be removed from fibreglass without damaging the gel coat. Steel, alloy and timber hulls can be cleaned quickly and thoroughly with Enviro Clean and Blast.

### Graffiti removed

- No Chemicals
- No Toxic fumes

Regular removal of graffiti from public areas acts as a deterrent to vandals.

This method of cleaning ensures minimal disturbance to the general public and their surrounds.

### Mould/Mildew

Enviro Clean and Blast can be a highly effective treatment on mould and mildew.

### Buildings cleaned (inside and out), furniture restored and paint removed

Ability to operate at low pressure allows varnishes and paints to be removed without damaging precious heirlooms.

Tiled, paved, exposed aggregate and concrete surfaces can be cleaned and rejuvenated while creating a non-slip surface.

### Swimming pools

No need to retile the pool – clean it with Enviro Clean and Blast.

### Trains, trucks, cars and heavy machinery

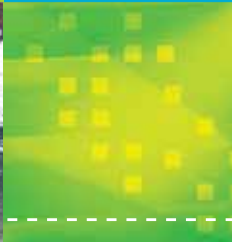

Paint and rust can be removed from panels easily. Lower operating temperatures mean heat distortion of panels is avoided. Able to clean over electrical wires and hoses.

### Road marking removed

Enviro Clean and Blast can be used on all road surfaces, including anti-skid, without impairing their performance.

### Rust and corrosion

The gentle abrasive technique readily removes rust and corrosion.

## ENVIRO CLEAN AND BLAST

The environmentally friendly  
wet sandblasting system

- Safe mobile rig
- Low volume of water used
- Eco-friendly – no chemicals used
- Extremely fast and cost effective
- Greatly reduced overspray
- Little need to remove fixtures and fittings
- Precision pressure adjustment for delicate blasting.

Incorporating the patented

Farrow System
